

Complete the countingSort function.

countingSort has the following parameter:

int arr[n]: an array of integers Returns Nothing. Print the sorted array with each element separated by a space.

Input Format

The first line contains an integer n, the number of elements in the array. The second line contains n space-separated integers. 10 11 3 2 1 4 5 6 4 3

Constraints

$1 \leq n \leq 100000$ $0 \leq arr[i] < 100$

Output Format

1 1 1 2 3 3 3 4 4 5 6

Language

Java 8

```
14 10 public static void main(String[] args) {
15 17     public class Solution {
16 16         public static void main(String[] args) {
17             Scanner sc=new Scanner(System.in);
18             int n = sc.nextInt();
19             int[] count=new int[100];
20             for(int i=0;i<n;i++){
21                 int num=sc.nextInt();
22                 count[num]++;
23             }
24
25             for(int i=0;i<100;i++){
26                 while(count[i]>0){
27                     System.out.print(i+" ");
28                     count[i]--;
29                 }
30             }
31         }
32     }
33 }
34
35 }
```
