

Problem

Given an amount and the denominations of coins available, determine how many ways change can be made for amount.

There is a limitless supply of each coin type.

Example

Submissions

There are ways to make change for : , , and .

Function Description

Complete the getWays function in the editor below.

getWays has the following parameter(s):

- int n: the amount to make change for
- int c[m]: the available coin denominations

Leaderboard

Returns

- int: the number of ways to make change

Input Format

The first line contains two space-separated integers and , where:

 is the amount to change

 is the number of coin types

Discussions

The second line contains space-separated integers that describe the values of each coin type.
