

Problem

Given two integers dividend and divisor, divide them without using the multiplication (*), division (/), or modulus (%)

operators.

Return the quotient obtained after dividing the dividend by the divisor.

Input Format

The first line contains an integer dividend. The second line contains an integer divisor.

Constraints

$-2^{31} \leq \text{dividend}$, $\text{divisor} \leq 2^{31} - 1$ divisor $\neq 0$

Output Format

Print the quotient.

Sample Input 0

10
3

Sample Output 0

3

Language

Python 3

```
1 # Enter your code here. Read input from STDIN. P
2 a = int(input())
3 b = int(input())
4
5 f = (a < 0) != (b < 0)
6
7 a = abs(a)
8 b = abs(b)
9
10 q = 0
11
12 while a >= b:
13     a -= b
14     q += 1
15
16 if f:
17     q = -q
18
19 print(q)
20
```

Line: 12 Col: 14
