

Problem

Given an integer array of size N and an integer X , find all unique triplets (a, b, c) such that: $a + b + c = X$. The indices of the elements are different. Print the triplets in ascending order. If no triplet exists, print No Triplet Found.

Input Format

The first line contains an integer N . The second line contains N space-separated integers. The third line contains the target sum X .

Constraints $3 \leq N \leq 10^5$ $-10^9 \leq arr[i] \leq 10^9$ $-10^9 \leq X \leq 10^9$ **Output Format**

Print each unique triplet in ascending order, one triplet per line. If no such triplet exists, print:
No Triplet Found
